

A snapshot of FORTarchitect

Committed to ***excellence in sustainable design*** and high quality buildings that are less of an ecological burden. Anne Stevens is a LEED-accredited architect qualified to design and manage projects under the LEED environmental rating system. She is also co-creator of the award-winning Building Blocks Sustainable House design. The right choice for sustainability in both commercial and residential projects.

Big enough to serve your needs, whatever the size of your project. ***Small enough*** so that your project will be top priority. When you hire FORT you get Anne Stevens, the owner and principal. I will always be your go-to person and I will ensure your project gets the attention and expertise it deserves. Small enough, also, to operate cost-effectively so you are not paying for overhead and bureaucracy.

Proven success with permit expediting and approvals means that your projects will be approved as quickly and smoothly as possible. I always work hard to build bridges with City officials at the Building, Heritage, Zoning and Planning Departments – for your benefit.

Ongoing ***continuing education*** and ***professional development*** mean that you can be sure you are getting current and cutting-edge knowledge.

Fastidious attention to detail and ***proactive coordination*** mean costly and time-consuming errors will be kept to a minimum thereby saving you money, time and trouble.

Our regular ***project status updates*** are like a personal project blog. They mean that you will always know exactly how your project is progressing.

More than ***fifteen years' experience*** with a variety of clients – large, medium and small; institutional, commercial and private; governmental, municipal and non-profit; corporations, families and eight year-olds - means that I will understand the unique requirements of your project too.
